

Application No.: 10/748,479

Case No.: 58846US002

Amendments to the Specification

Please amend the specification as follows:

On page 11, please replace the paragraph that starts on line 7 with the word "Liquid" and ends on line 13 with the word "used" with the following amended paragraph:

Liquid can be gravity fed to the outlet end 15 of the liquid passageway 16 from a suitable container at its inlet end 17, which container could be the container described in U.S. Patent No. 6,588,681 that includes a portion of a connector adapted for manually releasable engagement with a connector portion 80 illustrated about the inlet end 17 of the liquid passageway 16. Alternatively, smaller volume liquid containers such as those described in U.S. Patent No. 6,752,179 ~~Application No. 10/112,182 (Schwartz), filed March 28, 2002~~ could be used.

On page 11, please replace the paragraph that starts on line 14 with the word "Optionally" and ends on line 22 with the word "horns 24" with the following amended paragraph:

Optionally, a pressure tap 77 (see Figure 2) communicating with the second air passageway 26 and closed when not used could be provided to supply air pressure to the pressurized liquid container described in U.S. Patent Application Publication No. US 2004/0084553 A1, ~~published May 6, 2004 No. 10/279,518, filed October 24, 2002~~, which pressurized liquid container could be used to supply liquid to the liquid passageway 16 of the spray gun 10. The pressure tap 77 should communicate with the second air passageway 26 at a position spaced (e.g. over 1 inch or 2.54 cm) from the outlet passageways 28 and outlet apertures in the air horns 24 so that it does not cause air pressure differences between the two horns 24.

On page 11, please replace the paragraph that starts on line 23 with the word "The" and ends on line 25 with the word "reference" with the following amended paragraph:

The content of the aforementioned U.S. Patent Nos. 6,588,681 and 6,752,179 and U.S. Patent Application Publication No. US 2004/0084553 A1 ~~U. S. Applications nos. 10/112,182 and 10/279,518~~ are hereby incorporated herein by reference.
